## KJ-1590 II

### Key Product Data

RIDGID introduces the KJ-1590 II, the successor of the professional RIDGID/KOLLMANN water jetting machine for cleaning drains from 32-150mm.

This powerful heavy-duty water jetter is ideal for cleaning a drain line and small blockages.

The KJ-1590 II is constructed with the exact same motor and pump as the current KJ-1590. With this known construction we have a durable machine that has proven to be from a high quality. Also this makes a lot of parts interchangeable.

The KJ-1590 II uses a new jetting hose, standard with 20m length. The hoses and accessories from the “old” KJ-1590 are compatible so you can use the same nozzles and accessories as currently used with the KJ-1590.

The new, compact cart makes the unit very easy to transport. The well balanced frame is equipped with rubber wheels and a guiding wheel to facilitate transport.

The machine comes in one configuration: a compact cart with the motor and pump.

The known pulse action system lets the hose vibrate so it can easily negotiate sharp bends.

Features of the new drain cleaner are:

- Flow 15l /min
- Operating pressure 80bar (maximum 90bar)
- 4 Nozzles can be mounted on the frame
- 2.2kW motor with overload protection
- 3-plunger pump with pulse action
- Dual type water inlet
- Large wheels for easy transport
- Wheel on frame to guide transport onto truck/van

## Product offering, Part number and Pricing

Cat. No	Model	Description
35511	KJ-1590 II	KJ-1590 with cart, 1/4" x 20m hose and 2 nozzles

- \* a 1/4" propulsion and a 1/4" penetrating nozzle
